

# Retail Banking – Digital Account Opening Process

## Document Control

Document ID: RB-OPS-ACC-001 | Version: 2.3 | Owner: Retail Banking Operations | Effective: 01 July 2026

## Purpose

Defines the standard process for opening a retail savings account through digital and branch-assisted channels.

## Process Flow

Application Capture → Identity Verification → Document Validation → KYC Screening → Risk Assessment → Product Validation → Customer Consent → Core Account Creation → Notification.

## Business Rules

Mandatory identity and address information must be present before KYC processing. Failed document-quality checks enter an exception queue. Potential sanctions or PEP matches require compliance review. Duplicate customer profiles must be resolved before account creation.

## Roles

Customer submits information and consent. Onboarding Service validates application data. KYC Service performs verification. Compliance reviews escalations. Core Banking creates the account. Notification Service confirms completion.

## Exceptions

Incomplete applications are returned for correction. KYC mismatches require manual verification. High-risk cases require compliance approval. Core-system failures remain pending for controlled retry.

## KPIs

Application completion rate, KYC pass rate, manual-review percentage, average onboarding time and account-creation success rate.
