

AI Employee Productivity Copilot – Business & Functional Requirements

Document Control

Document ID: EAI-REQ-001 | Version: 1.4 | Product Owner: Enterprise Digital Workplace | Status: In Review

Business Objective

Provide employees with a secure AI workspace that consolidates authorized email, collaboration messages and project documents into searchable business intelligence.

FR-01

Employees can ask natural-language questions about information within their authorized scope.

FR-02

The system retrieves relevant source content and provides grounded answers with source references.

FR-03

Email analysis identifies summaries, decisions, action items, owners and dates.

FR-04

Collaboration analysis identifies decisions, risks, questions and follow-up actions.

FR-05

Document intelligence supports semantic retrieval across approved business documents.

FR-06

Functional analysis produces business processes, actors, rules, capabilities and dependencies.

FR-07

Technical analysis identifies applications, APIs, databases, integrations and data flows.

FR-08

Executive analysis produces status, decisions, risks, dependencies and outstanding actions.

FR-09

Retrieval must respect source-system authorization.

FR-10

Requests, retrieved sources, model endpoints and tool calls must be observable for audit and evaluation.
