

AI Employee Productivity Platform – Security & Guardrails Standard

Document Control

Document ID: AI-SEC-004 | Version: 1.2 | Owner: Information Security Architecture | Status: Draft

Objective

Prevent unauthorized retrieval, disclosure and execution while enabling AI assistance.

Identity

Employees authenticate through enterprise identity. Authorization is evaluated before email, chat or document retrieval.

Prompt Injection

Retrieved documents, emails and messages are untrusted content. Embedded instructions must not override system policies, security controls or tool permissions.

Data Leakage

The platform should detect and prevent exposure of credentials, secrets, restricted identifiers and protected information.

Tools

Initial capabilities should be read-only. Sending messages, creating tickets or modifying records requires explicit authorization and human approval.

Audit

Record user identity, request time, sources accessed, tools invoked, model endpoint and action status.

Testing

Security evaluation covers unauthorized retrieval, cross-user access, prompt injection, malicious content, sensitive-data leakage and improper tool execution.
